PROFILE

Unity developer with 4 years of professional experience shipping two multiplayer VR products on Meta Quest. Specialist in gameplay AI, networked systems, and scalable C# architecture.

EXPERIENCE

VR Gameplay & Systems Engineer

Campus XR / Kudos Studios

June 2022 – Present

Headrush Arena – multiplayer Meta Quest arena shooter

- Designed a modular bot AI system using Behaviour Trees with an AI Director coordinating enemy behaviour through event-based communication, keeping encounters coordinated and pressure well-paced
- Solved a multiplayer stability issue where clients stalling on load caused crashes; built a self-recovery system that handles stuck clients gracefully rather than silently failing
- Shipped PVE Survival, TDM and FFA game modes, an intensity-scaling spawn system, match event broadcasting, and a full player feedback layer

Campus XR – immersive VR education platform, Meta Quest

- Built a Utility AI system for interactive animals with player bonding behaviours, adopted as the standard AI architecture across the project
- Implemented an AI debate system using Whisper for voice input, with an AI judge evaluating student arguments against historical characters in real time and displaying scored results on a shared leaderboard
- Contributed to a range of gamified learning experiences including a multiplayer quiz arena and educational minigames

TECHNICAL SKILLS

Core	C# (4 yrs), Unity, Meta Quest, Meta XR SDK
AI / Gameplay	Utility AI, Behaviour Trees, GOAP, Finite State Machines, NavMesh
Architecture	ServiceLocator, ScriptableObject pipelines, event-driven systems, UniTask
Networking	Coherence, Photon, multiplayer architecture, RPC vs synced state design
Tooling	Git, PlasticSCM, Agile development

EDUCATION

BA (Hons) Game Development: Programming – First Class Honours

Falmouth University 2019–2022

Level 3 Diploma in Creative Media Production – Merit

Plymouth City College 2017–2019
